

# Workforce for ArcGIS

Workforce for ArcGIS is a mobile solution that enables location-based decision making for better field workforce coordination and teamwork. The app enables a common view in the field and the office. Use the web app in the office to create and assign work to mobile workers, who use the mobile app to work through their personal To Do list.

## Organizations using Workforce for ArcGIS benefit from:

**Everything you need on one device:** Mobile workers can easily view and process work assignments, provide updates on work status, and inform others of their location, all from one device.

**Greater agility:** Using real-time and location-based information, dispatchers can assign and prioritize fieldwork on the fly and ensure that work is assigned to the right people at the right time.

**Increased productivity:** Replace time-consuming and error-prone manual workforce management processes, reduce downtime, and keep projects on schedule.

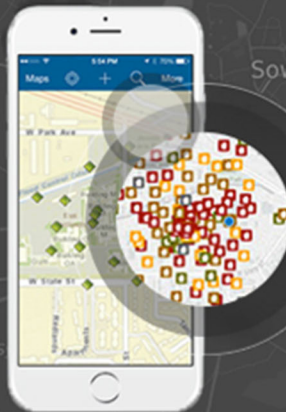

Use this set of ArcGIS apps in combination with Workforce for ArcGIS to maximise efficiency in your field workforce.

+

Navigator  
for ArcGIS

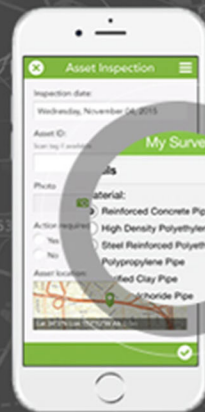

Get field workers on the best possible route.

+

Collector  
for ArcGIS
