Harnessing Geospatial Intelligence for Africa's
Sustainable and Resilient Future

17-21 November 2025, Alisa Hotel, Accra, Ghana

PeaceEye Integrated Geospatial Risk

Analytics

PeaceEye FlexCo provides decision-makers with timely, **location-specific risk intelligence** by integrating **Earth observation data** with human, media, and **open-source intelligence**, enhanced by AI-driven analytics. This empowers more informed, decisive action that helps strengthen peace in volatile environments.

Causes of conflict in Africa

- **Competition Over Natural Resources (Land, Water, Minerals)**
- Weak Governance and Political Marginalization
- Poverty and Economic Inequality
- Ethnic and Communal Tensions
- Armed Groups, Militias, and Extremism
- **Climate Change as a Threat Multiplier**

Conflict Risk Resilience

Conflict risk resilience refers to the capacity of a community, system, or institution to **anticipate**, **withstand**, adapt to, **prevent** and recover from factors that increase the likelihood of violent conflict.

Number of event types related to water, 2017-2023

South Sudan : Unraveling Conflict Risk Drivers

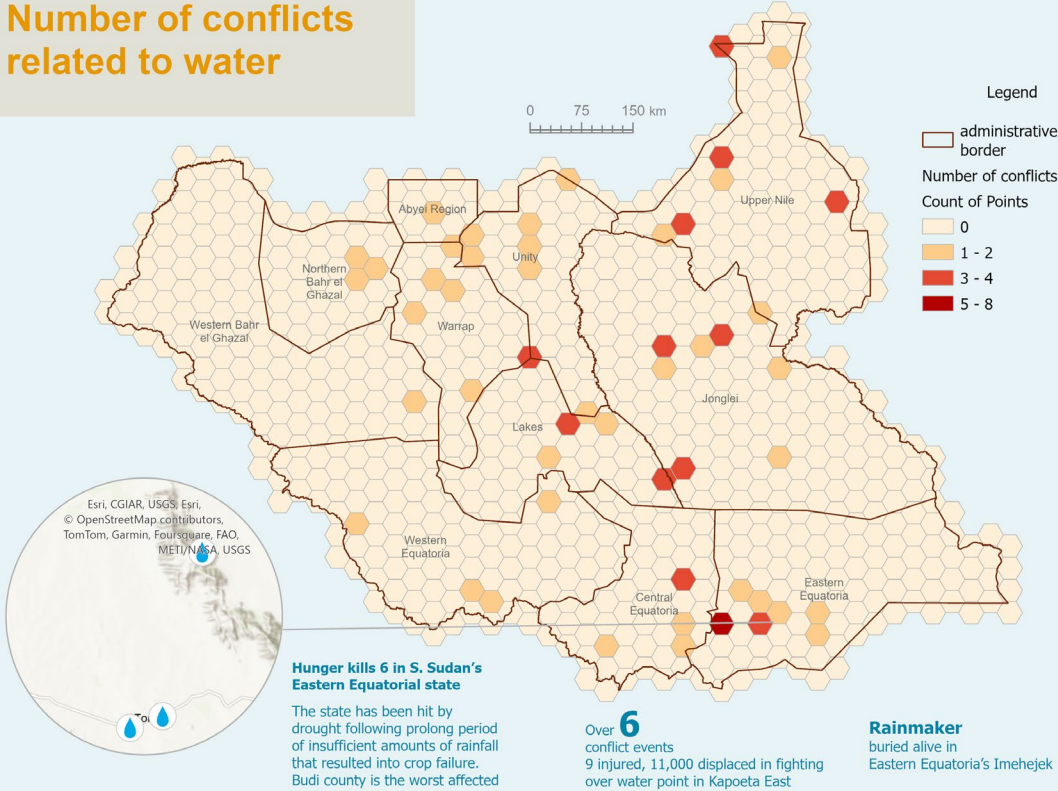

This chart highlights the prevalence of conflict event types across regions in South Sudan.

Key Trends:
Violence against civilians (red) appears prominently across multiple regions. Battles (light blue) are also widespread. Other event types like protests, riots, and strategic developments have relatively lower occurrences.

Central Equatoria has the highest counts of violence against civilians and Battles.

Nigeria : Election Risk

- PeaceEye is also currently working on providing conflict event data (similar to ACLED DATA) tailored towards election risk in Nigeria.
- Using Open-Source Insights (OSINT): News Media, etc., in partnership with Headline Hunters GmbH.
- Conflict event data extraction, categorization, georeferencing, and mapping, leveraging NLP, LLMs.
- An Emergency Insights tool is also in the works, applicable to the Election Use Case

PeaceEye

In conclusion

Geospatial Intelligence shows us not just where risks are, but where hope lives.

Together, we can map a safer, more conflict resilient future for Africa
